describes the characteristics of the planets farthest away from the sun jupiter saturn uranus and neptune and their place in the solar system

one of the most fundamental discoveries of the solar system was the detection of four moons in orbit around jupiter by galileo galilei in 1610 the discovery was significant not only in the context of jupiter it gave credence to and was instrumental in firmly establishing the heliocentric system of nicolaus copernicus almost four centuries after galileo s discovery extensive observations by the two voyager spacecrafts have once again revolutionized our thinking about the major planets their composition structure origin and evolution this book is an attempt at summarizing our present understanding of the atmospheres and ionospheres in the outer solar system with particular emphasis on the relevant physics and chemistry i was motivated to prepare this manuscript for the following reasons first after undergoing rapid expansion in the recent past the subject has finally attained sufficient maturity to warrant a monograph of its own second i have felt that as a result of recent observations new and challenging problems have arisen whose resolution requires unconventional analysis and theoretical interpretation of existing data as well as the collection of new kinds of data i believe the time is ripe to put these issues in the appropriate scientific perspective with the hope of stimulating novel theoretical observational and laboratory studies i have highlighted the significant scientific problems throughout the book especially at the end of each chapter
